

# PRODUCT SHEET

## ZyCOLD Professional

ZyCOLD Professional provides additional functionality on top of the already comprehensive tool set found in the standard ZyCOLD product. For instance, with ZyCOLD Professional spool files from the mainframe, AS/400 or server are processed in such a way that the layout can be completely modified to your needs.

ZyCOLD Professional imports the spool file and splits the spool file into single documents. After that, every single character, word, line or area in the spool file can be placed in a form that you can design yourself. You can even include graphs, pictures or barcodes in this form. Instead of using preprinted forms, you can now include the layout of your spool file documents in the export of ZyCOLD Professional.

### Related Products

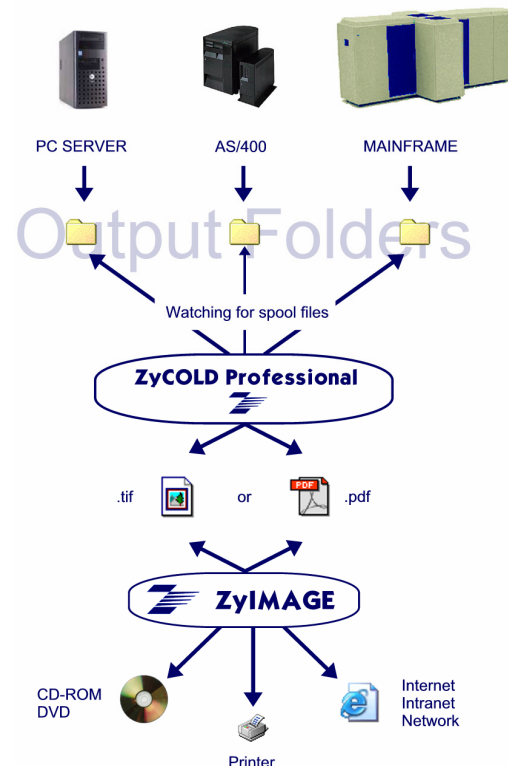

- ZySCAN
- ZyFIND
- ZyINDEX
- ZyIMAGE Webserver
- ZyALERT

### Features

- Converts spool files to searchable TIFF and PDF files
- Splits spool files in separate documents
- Converts spool files with different character sets (such as ANSI) to standard ASCII files
- Converts strings
- Manages multiple folders
- Extracts field information from the spool file
- Seamlessly integrates with ZyIMAGE
- Enables you to design your own forms and create the layout you require
- Provides tools so you can include barcodes, images, graphs in your design
- Eliminates the need for pre-printed forms
- Generates high quality TIFF images

You can export the documents from ZyCOLD Professional as TIFF images, which can include meta information that is extracted from the spool file. This meta information is stored as manual index fields in ZyIMAGE. Alternatively, ZyCOLD Professional can export the documents as PDF files, which can be indexed instantly by the ZyIMAGE program.

The information processed by ZyIMAGE is full-text searchable and, if applicable, you can also search on the manual index fields. Within seconds you can find the exact document located somewhere in your spool files. The document that you retrieved can be emailed, printed or faxed right away, saving you a lot of time and money.

### Batch Printing

After the information is stored in ZyIMAGE, you can select the documents you want to print and send these to the printer. The ZyIMAGE software includes advanced printing options to make sure that you can print your images at rated speed and maintain a high throughput of images to the printer.

With the ZyALERT program, you can automatically start your printing. All new documents, which will be stored in the archive, are sent immediately to the printer.

\* ZyCOLD Professional includes a special set of tools for Zylmage so that both systems can be integrated and ZySCAN can run unattended in the background. ZySCAN is part of the Zylmage basic license package and is a powerful tool that easily processes paper documents and existing image formats into searchable information. The ZyCOLD Professional software will be installed and configured by ZyLAB according to the requirements of the customer. The price of ZyCOLD Professional is exclusive installation and configuration. For configuration changes done by the customer additional training and products are required.
